Healthcare providers and patients connect in the cloud

Smart Healthcare

Healthcare providers and patients connect in the cloud

Healthcare companies are transforming the healthcare environment with apps to connect providers and patients with information to ensure affordable, quality care. The cloud-based platforms offer data collection and collaboration along with scalability and built-in privacy and data security.

Cloud-based healthcare systems collect data from multiple sources including electronic medical records, monitoring equipment and personal devices. Having all the information in one location allows professionals to make more informed decisions regarding diagnosis, treatment and recovery options.

Collaboration applications better connect caregivers with patients for specialized care. Healthcare provides can remotely monitor patients with chronic conditions while encouraging patients to take a more active role in their health by providing them with information on personal wellness and disease prevention and management.

RECOMMENDED PRODUCT

MultiConnect® AW

Analog-to-Wireless Converter (MT200A2W Series)

- Extends the life of legacy dial-up devices by connecting them to cellular networks
- Saves time and money on post purchase industry-specific certifications
